The Spring Framework is a very robust framework, released in 2002. Its core features can be applied to plain Java applications or extended to complex, modern web applications. As it's

constantly being updated and is following new architectural and programming paradigms, it offers support for many other frameworks that work hand-in-hand with it. Spring Annotations: Core Framework Annotations When it comes to Spring Framework you can work decoratively via XML or annotations, but in this article we will focus on the notes. Before you start using the transactions you need to tell Spring that you want to perform a transaction control via annotations, this is done through configuration shown in Listing 1 in the file applicationContext.xml. Transaction Control Using Annotations in Spring Framework Spring Framework 2.5 added the annotations to the framework. Before that, the XML files defined every

configuration. Annotations became more convenient to reduce the XML configuration files and annotate the classes and methods with different annotations used at the time of scanning the files in the classpath. As it's constantly being updated and is following new architectural and programming paradigms, it offers support for many other frameworks that work hand-in-hand with it. Spring Annotations: Spring Cloud Starting from Spring 2.5 it became possible to configure the dependency injection using annotations. So instead of using XML to describe a

bean wiring, you can move the bean configuration into the component class itself by using annotations on the relevant class, method, or field declaration. Annotation injection is performed before XML injection. Spring - Annotation Based Configuration - Tutorialspoint The Spring TestContext framework available in the spring-test module provides the `@ContextConfiguration` annotation which can accept an array of component class references — typically `@Configuration` or `@Component` classes. Configuration (Spring Framework 5.2.8.RELEASE API) Spring Framework Annotations By jt September 20, 2017 32 The Java Programming language provided support for Annotations from Java 5.0. annotations and the Spring Framework started using annotations from the release 2.5. spring framework annotations Archives - Spring Framework Guru We can use this annotation to make Spring initialize other beans before the annotated one. Usually, this behavior is automatic, based on the explicit dependencies between beans. We only need this annotation when the dependencies are implicit, for example, JDBC driver loading or static variable initialization. Spring Core Annotations | Baeldung Indicates that a method produces a bean to be managed by the Spring container. Overview. The names and semantics of the attributes to this annotation are intentionally similar to those of the `<bean/>` element in the Spring XML

schema. For example: Bean (Spring Framework 5.2.8.RELEASE API) Description If you are new to Spring Framework, or you know Spring but are new to Java configuration, take this as your first course.
